(54) FOOD-PREPARING CUP

(57)Abstract:

PROBLEM TO BE SOLVED: To improve the heating effect relating to a food-preparing cup formed of paper and film in two-layer structure.

SOLUTION: A thin paper 2 is laminated integrally with a transparent film 3 and formed into a cup-shaped vessel with the transparent film on the inner side. A plurality of openings 4 shaped like windows are provided in the peripheral wall 1a and the bottom wall 1b by partly cutting out of the thin paper 2. Since at the openings 4 heat is transmitted without passing through the thin paper, the heating effect is improved and baking or steaming of the cake can be finished in a shorter time. Moreover, the contents inside the cup can be seen through the transparent film 3 at the opening 4, the baking in progress can be checked, and the appearance of the product on display can be improved.
